A highly specialized frontend software engineer with 3 years experience. Has deep expertise in Javascript and Typescript. Familiar with different browser technologies & specifications.

SOFTWARE ENGINEERING EXPERIENCE

Goodtalent Corporation., Swindon, England, United Kingdom— *Frontend Engineer*

APR 2023- PRESENT

- In one year, has been instrumental in shipping 2 SaaS products, one of which was entirely built by me. Stack used included Typescript, Nuxt, DevExpress, Yup, Pinia.

- Built a hiring solution (frontend) incorporating jobs creation, subscription billing, talent & application management, real-time messaging with talents, hiring analytics etc.

- Part of a 2 man team that built a payroll & employee management solution (frontend), with country specific payroll settings, salary disbursement, remittances, payroll reports etc. Onboarded as new staff and started delivering commits within the first week.

- Showcased leadership qualities during hiring SaaS app development cycle, given a short delivery timeline, overcame challenges coordinating with contract staff, as well as creating a detailed project breakdown that guided the team to stay on track and deliver the app to production.

Support Sync Pro Ltd., Lagos, Nigeria— Director, *Frontend*

APR 2024- PRESENT

- Built and delivered white label (client hosted) version of ERP software for managing enterprise workflows & tracking employee productivity in 7 weeks. Mentors interns to onboard them into the engineering team for project continuity.
