

KASOPE JOHNSON

FULLSTACK SOFTWARE ENGINEER

+234 9029646160 | kasopej@gmail.com | linkedin.com/in/kasopejohnson | kasope-portfolio.netlify.app

PROFESSIONAL SUMMARY

Senior fullstack developer with 5 years experience in developing scalable, robust & optimized web applications with TypeScript, Nextjs, React/Vue & Nestjs. Excellent track record & **extensive experience building multiple solutions across finance, energy, hiring/staff management, workflow applications** etc. Adept at **designing/refining product architecture** to align with the business vision & growth and crafting fast, reliable solutions that support business & user satisfaction. Deep knowledge of frontend web security strategies. Fullstack engineer with frontend specialization

SKILLS

TypeScript
React/NextJs
Vue/NuxtJs

NestJs
SEO
Security

Code Architecture
Communication
Leadership

WORK EXPERIENCE

United Capital PLC, Lagos, Nigeria

June 2025 - Present

Senior Software Engineer

- Redeveloped the flagship investment application, focusing on improving scalability, stability, security & internationalization.
 - Made onboarding & investment purchase seamless, leading to increase in signups.
 - Streamlined codebase by making use of reusable react patterns, 100% typescript usage & linting to catch bugs very early. This reduced lines of code by 40% making codebase more manageable, and led to fewer hot fixes by catching regressions early.
 - Implemented strident security mechanisms against XSS, click-jacking etc as well as ensuring data privacy.
 - Stack used: React, NextJs, Shadcn, React Hook form, Zod, Webpack.

Support Sync Pro Ltd.

Apr 2025 – Nov 2025

Founding Engineer III (Self-employed, partnership) (Fullstack)

- Built a task management & issue tracking software for managing enterprise workflows & ticket tracking.
- Implemented dynamic, typescript controlled RBAC-driven views for different user roles.
- Ensured stringent security considerations were met via proper usage of CSP rules.
- Implemented Nestjs FileUpload module for handling file uploads for the applications (Amazon S3)
 - Implemented FileUpload repository for associating files with the relevant app, user as well as a metadata relationship for extra information. Used the repository to apply the relevant business rules
 - Used repository to power logic regarding file ownership and robust relationships. Also handled cleanup between soft deleted repository file records and storage via worker
- Stack: Typescript, Nuxt, Vue, NestJs, Typeorm, Postgresql, Docker, AWS, Yup, Pinia.

- First version was sold & deployed to a major African financial organization.

Goodtalent Corporation (Now Workskvad), Swindon, England, United Kingdom

April 2023 - May 2025

Frontend Engineer

- Built a hiring solution incorporating jobs creation, AI job recommendations, subscription billing, talent & application management, real-time messaging with talents, video interview recording, hiring analytics etc.
- Built a payroll & employee management solution, with localized payroll remittance calculations for 3 African countries, salary disbursement, remittances, payroll reports etc. **This has been used to pay thousands of dollars to employees seamlessly, including country staff of international companies such as Meta.**
- Helped develop a multi-frontend application architecture that embeds all Workskvad apps in a single parent domain via secure (whitelisted) iframes & cookie management. This allowed users to access all services from a single workspace efficiently.
- Developed a Single Sign-On platform to manage authentication for the entire workspace/app suite consisting of multiple applications. SSO includes superadmin level access to impersonate user sessions which has enabled quick resolution of complex user issues saving dozens of hours in resolving customer complaints.
- **Built & launched 5 enterprise applications in under 2 years, without compromising quality even under tight deadlines.**
- Stack used: Typescript, Nuxt, VueJs, DevExpress, Yup, Pinia & Tailwind.

Smartflow Technologies Ltd., Oregun, Lagos

Aug 2021 - Apr 2023

Software Developer (Frontend)

- Successfully migrated a legacy vue 2/Node 12 application to Vue 3/Node 20/Vite/Typescript. This upgrade eliminated 90% of vulnerabilities in the tech stack due to highly outdated npm modules. It also improved the maintainability of the application via accurate compile time type warnings & intellisense.
- Built and maintained applications for monitoring fuel station assets (pumps, tanks) as well as solar installations.
- Built a mobile-first PWA app for creating & approving diesel requests for industrial trucking companies. This has been used to manage fueling requests for hundreds of trucks saving hundreds of hours of manual work.
- Optimized CICD pipeline (Github actions), reducing costs by over 50% & app size by over 40% to improve UX.
- Stack used: NextJs, Shadcn, React Hook form, Zod, Tailwind, Vue, Vite, Vuetify, Bootstrap, Github actions
- Rebuilt retail fuel purchase management app in NextJs from Vuejs, to align with the company's shift to react ecosystem.

EDUCATION

B.Sc. in Mechanical Engineering, University of Lagos, Akoka, Lagos

2012-2017
