

# KASOPE JOHNSON

## FRONTEND SOFTWARE ENGINEER

+234 9029646160 | kasopej@gmail.com | linkedin.com/in/kasopejohnson | kasope-portfolio.netlify.app

### PROFESSIONAL SUMMARY

Senior frontend developer with over 5 years experience in developing scalable, robust & optimized web applications with TypeScript, Nuxt/Nextjs, React/Vue. Excellent track record & extensive experience **building multiple solutions across fintech, energy, HR, CRM/enterprise workflow applications** etc.

Adept at designing code architecture that scales with business needs and crafting reliable solutions that produce business & user satisfaction. Deep knowledge of web security & performance strategies. Frontend specialist but dabbles a little in the backend.

### SKILLS

Typescript  
Vue/NuxtJs  
React/NextJs

NestJs  
SEO  
Security

Code Architecture  
Communication  
Leadership

### WORK EXPERIENCE

#### United Capital PLC, Lagos, Nigeria

June 2025 - Present

##### Senior Software Engineer

- Rebuilt the web application for Investnow, used by over 10,000 users daily (during peak periods) to manage their investment portfolios. This rebuild focused on improving scalability, stability, security & internationalization.
  - Rewrote codebase using reusable & modular react patterns, reducing lines of code by 40%. Added close to 100% type safety & extensive linting. These changes improved user accessibility, code readability at scale, and drastically reduced regressions.
  - Implemented completely new design and style guide from ground up, and migrated to Nextjs
  - Above work provided the foundation for unprecedented scaling of the application, with usage increasing at a rapid rate (>200% over 6 months) along with constantly evolving business requirements
  - Wrote automated tests to verify changes & reduce regressions
  - Built a revamped IPO module in 2 weeks that has already processed thousands of transactions in two days
  - Implemented stringent security mechanisms against XSS, click-jacking etc as well as ensuring data privacy
  - Integrated error reporting & session tracking tools for quick visibility into user issues & painpoints, as well as user analytics
  - **Stack: React, NextJs, Shadcn, React Hook Form, Zod, Docker, Logrocket, Jest**

#### Support Sync Pro Ltd.

Apr 2025 – Nov 2025

Founding Engineer III (Self-employed, partnership) (Fullstack)

- Built an ERP/workflow management system for managing enterprise workflows & issue tracking. First version was sold & deployed to a major financial organization where it has been used to revolutionize their customer support workflow across all divisions. V2 cloud hosted enterprise SaaS is currently paused.
- Implemented dynamic, typescript controlled RBAC-driven views for different user roles.
- Ensured security requirements were met via application of CSP rulesets.
- **Stack: Typescript, Nuxt, Vue, Vuetify/Shadcn(vue), AWS CodeDeploy, Yup, Pinia, Tailwind**

## Goodtalent Corporation (Now Workskud), Swindon, England, United Kingdom

April 2023 - May 2025

### Frontend Engineer

- Built a hiring solution incorporating jobs creation, AI job recommendations, subscription billing, talent & application management, real-time messaging with talents, video interview recording, hiring analytics etc.
- Built a payroll & employee management solution, with localized payroll remittance calculations for 3 African countries, salary disbursement, remittances, payroll reports etc. **This has been used to pay thousands of dollars to employees seamlessly, including country staff of international companies such as Meta.**
- Helped develop a multi-frontend application architecture that embeds all Workskud apps in a single parent domain via whitelisted iframes & cookies. This allowed users to access all services from a single workspace efficiently.
- Developed a Single Sign-On platform to manage authentication for the entire workspace/app suite consisting of multiple applications. SSO includes superadmin level access to impersonate user sessions which has enabled quick resolution of complex user issues saving dozens of hours in resolving customer complaints.
- **Stack: Typescript, Nuxt, VueJs, DevExpress, Yup, Pinia, Tailwind**

## Smartflow Technologies Ltd., Oregun, Lagos

Aug 2021 - Apr 2023

### Software Developer (Frontend)

- Successfully migrated a legacy vue 2/Node 12 application to Vue 3/Node 20/Vite/Typescript. This upgrade eliminated 90% of vulnerabilities in the tech stack due to highly outdated npm modules. It also improved the maintainability of the application via type safety.
- Built and maintained applications for monitoring fuel station assets (pumps, tanks) as well as solar installations.
- Built a mobile-first PWA app for creating & approving diesel requests for industrial trucking companies. This has been used to manage fueling requests for hundreds of trucks saving hundreds of hours of manual work.
- Optimized CI/CD pipeline (Github actions), reducing costs by over 50% & app size by over 40% to improve UX.
- Rebuilt retail fuel purchase management app in NextJs from Vuejs, to align with the company's shift to react ecosystem.
- **Stack: Vue, Vite, Vuetify, NextJs, Shadcn, Tailwind, Github actions**

## EDUCATION

---

## B.Sc. in Mechanical Engineering, University of Lagos, Akoka, Lagos

2012-2017
